Description

The IRF350, IRF351, IRF352, and IRF353 are n-channel enhancement-mode silicon-gate power field-effect transistors. IRF350R, IRF351R, IRF352R and IRF353R types are advanced power MOSFETs designed, tested, and guaranteed to withstand a specified level of energy in the breakdown avalanche mode of operation. All of these power MOSFETs are designed for applications such as switching regulators, switching converters, motor drivers, relay drivers, and drivers for high-power bipolar switching transistors requiring high speed and low gate-drive power. These types can be operated directly from integrated circuits.

The IRF types are supplied in the JEDEC TO-204AA steel package.
